EDUCATION

B.Sc. Software Engineering | University of Calgary — Calgary, AB

Expected graduation: June 2026

Engineering Scholarship: **Seymour Schulich Community Service & Entrepreneurial Entrance Award**

PROFESSIONAL SUMMARY

Software Engineering student at the University of Calgary with 1+ year of full-stack development internship experience building production web applications using C#, React, Java Spring Boot, and SQL

EXPERIENCE

Grupo Roble — La Libertad, El Salvador

Software Engineer Intern — *May 2025 - August 2025*

- Led the development of an **ASP.NET MVC (C#)** administrative portal that enhanced the reporting process efficiency by **40%** and was adopted by **5+** operations teams across Central and South America
- **Troubleshot** and enhanced internal automation tools using Power Apps, reducing manual processing time by 20%
- Designed and integrated SQL Server database systems to support **real-time reporting** and secure data management
- Collaborated with business and systems teams to convert operational requirements into scalable technical solutions

Canadian Sport Institute Alberta — Calgary, AB

Software Engineering Researcher — *Sept 2025 - April 2026*

- Engineered a **markerless motion capture system** to analyze elite athlete biomechanics in outdoor performance testing environments
- Developed computer vision and signal processing pipelines to estimate joint kinematics; achieved **75% correlation** with industry-standard motion capture systems
- Built data processing and validation workflows to compare sensor outputs with professional-grade hardware
- Presented technical findings, system limitations, and hardware integration recommendations to industry sponsors

TBox — San Salvador, El Salvador

Software Engineer Intern — *May 2024 - August 2024*

- **Troubleshot** deployment issues in a team of 5, deployed fixes, ensured application stability, and corrected identified data errors
- **Designed** software testing and QA documentation for 8 modules and **reduced defects by 30%**
- Prepared and presented product demonstrations to internal and external users, providing feedback to clients and the development team

PROJECTS

Real-Time Payment Gateway & Fraud Engine | Java, Springboot, React, Vite

- Built a payment gateway MVP that can support the idea of "instant settlement" simulations
- Implemented a robust state machine and an idempotency layer to ensure data integrity and prevent duplicate financial transactions.
- Developed a rule-based risk engine to evaluate transaction velocity and amount thresholds
- Built a React UI for payment forms and a risk decision explanation panel

RateMyDino |Python, JavaScript, NextJS, Flask

- Built a full-stack professor review app for University of Calgary students using RateMyProfessor data
- Managed the workflow in a team of 6 members to deliver backend, frontend, and QA components on schedule while working in an Agile environment
- Worked alongside engineers to create backend services, do prompt engineering, and write unit tests using **Pytest**; boosted the system's reliability by **15%**.

Football Match Classification Machine Learning Model | Python, Linear Regression, Gradient Boosted Regression, Neural Networks

- Engineered and evaluated **3+ predictive** ML models to classify 1,000+ football matches as Win/Draw/Loss with up to **80% accuracy**
- Using NumPy and Pandas libraries, normalization, one-hot encoding, and feature selection were applied to clean and structure CSV datasets with over **20 features**

TECHNICAL SKILLS

Programming Languages: Python, C#, Java, JavaScript, TypeScript, C/C++, SQL, Bash, HTML, CSS

Frameworks & Technologies: React, Spring Boot, Flask, FastAPI, ASP.NET MVC, REST APIs, SQL Server, MySQL, PostgreSQL

Tools & Platforms: Git, GitHub, Docker, Linux, SSMS

Development Practices: Agile, MVC Architecture, OOP, Unit Testing, Debugging, Troubleshooting, Documentation
